Information

The Silenceair 265 * 125mm weather louvre and long spray cup is designed for use with the Silenceair 140mm acoustic ventilator (11-02-01) when installed in brick cavity walls. The louvre is designed to allow a standard single brick opening in the wall for the air intake. This minimises the size of the grille.

The weather louvre is designed to exclude most rain, and the spray cup is designed to capture wind-blown water spray.

An insect screen is included in the system, as well as colour coordinated screws.

Typical Installation diagram with Silenceair 140mm acoustic wall vent.

The weather louvre and storm cup are designed to slot into the air intake of the Silenceair 140mm unit.

The weather louvre is designed to accommodate a variety of external wall thicknesses and to cover a single brick air intake opening.

When installed, only the slim lines of the weather louvre are visible, offering a far more aesthetic solution than traditional storm louvres.
