Geneve, Switzerland

## Information

The Silenceair weather louvre and short draft spray cup is designed to be installed in a variety of wall scenarios where the external wall material is a sheet or board, such as CFC sheeting or timber boards.

The weather louvre is designed to exclude most rain, and the spray cup is designed to capture windblown spray. Any spray collected will simply drain back outside through the slats of the weather louvre.

An insect screen is included in the system, as well as colour coordinated stainless steel screws.

For details on lead times for our custom colours, please contact us.

The weather louvre and storm cup are designed to slot into the air intake of the Silenceair 140mm unit.

The weather louvre is designed to accommodate a variety of external wall thicknesses.

Installation diagram with Silenceair 140mm acoustic wall vent.

When installed, only the slim lines of the weather louvre are visible, offering a far more aesthetic solution than traditional storm louvres.
